

LARGE TUMOR (FIBROID UTERUS) OPERATED AT AM SHAIKH HOSPITAL

A lady aged 46 yrs came with the complaints of excessive menstrual flow, backache and pain abdomen, since last 5-6year. She was being treated for the above complaints by a doctor since 4-5 yrs. Patient had menorrhagia, and irregular periods.

Patient was diagnosed to have a mass per abdomen which was about 20 wks size.

A ultra sonography was done and confirmed that the patient had intramural fibroid. Sonography report showed a large fibroid in the uterus size 16cm by 13cm. other organs were normal. Patients Hb% was 6gms% and other biochemical profile was normal.

Patient was transfused with 3 points of blood and was prepared for abdominal hysterectomy. She was successfully operated and the tumor along with the uterus was removed, that is total abdominal hysterectomy was done successfully, at A. M. Shaikh hospital by Dr V. D. Kuchabal consultant obstetrician and gynec surgeon.

Fibroid uterus are usually benign tumors with a rare possibility of malignant potential.

They are the tumors of the reproductive age group. They usually remain small in size and may be asymptomatic. Here was a case of large fibroid uterus about the size of 20- 22 wks size which was operated successfully by Dr V.D. Kuchabal and removed. The patient was discharged from the hospital on the 8th day without any complications.
